ILO Competency	Communication: HCCC graduates will be able to communicate effectively in formal and informal exchanges with others. Students will be able to read, write and speak to facilitate discipline specific applications and to further their success in other educational endeavors, and/or career situations.	Knowledge management: HCCC graduates will be able to manage information by locating, organizing and analyzing research gathered via traditional and contemporary methods. Students will develop computer technology competency in research, communication and discipline specific software applications.	Problem solving: Students will use critical thinking and integrative decision-making skills to systematically and efficiently solve a variety of qualitative and quantitative challenges. Students will be able to develop well-reasoned arguments and conclusions, quantifying results through logical cognitive processing through means that may include the scientific method and mathematical reasoning.	Ethics and social responsibility: Students will develop a value set adopting and applying ethical awareness of program specific codes and/or socially responsible standards that will serve community needs on local, regional and national levels. Students will be prepared to be socially responsive (global?) citizens, committed to developing ethical, social and professional characteristics of civility and integrity for interactions with a diverse population comprised of various cultures, backgrounds and lifestyles.	Aesthetic responsiveness: Students will be able to recognize and appreciate literary and artistic expression in the visual and performing arts. Students will apply a strong liberal arts foundation to facilitate an understanding of and appreciation for Arts and Humanities.

ILO Competency	Communication: HCCC graduates will be able to communicate effectively in formal and informal exchanges with others. Students will be able to read, write and speak to facilitate discipline specific applications and to further their success in other educational endeavors, and/or career situations.	Knowledge management: HCCC graduates will be able to manage information by locating, organizing and analyzing research gathered via traditional and contemporary methods. Students will develop computer technology competency in research, communication and discipline specific software applications.	Problem solving: Students will use critical thinking and integrative decision-making skills to systematically and efficiently solve a variety of qualitative and quantitative challenges. Students will be able to develop well-reasoned arguments and conclusions, quantifying results through logical cognitive processing through means that may include the scientific method and mathematical reasoning.	Ethics and social responsibility: Students will develop a value set adopting and applying ethical awareness of program specific codes and/or socially responsible standards that will serve community needs on local, regional and national levels. Students will be prepared to be socially responsive (global?) citizens, committed to developing ethical, social and professional characteristics of civility and integrity for interactions with a diverse population comprised of various cultures, backgrounds and lifestyles.	Aesthetic responsiveness: Students will be able to recognize and appreciate literary and artistic expression in the visual and performing arts. Students will apply a strong liberal arts foundation to facilitate an understanding of and appreciation for Arts and Humanities.
